ATSI - Audio Test Solutions, Inc. Acquires the Amateur Radio RLC Product Line

BILLINGS, MT – APRIL 1ST, 2011.

Link Communications, Inc. has provided high-end repeater controllers to Amateur Radio operators for over twenty-two years. In that time our business has grown from one product line up to six different product lines. With this growth we have decided that more individual focus is needed in the RLC Product line. To further this focus ATSI - Audio Test Solutions Inc. of Billings, Montana has acquired the rights to the RLC Product Line from Link Communications, Inc. As of April 1, 2011, Link Communications will no longer be selling the RLC Product Line and it will no longer be featured on Link Communications' web site. ATSI values your relationship and will be working directly with Link Communications, Inc. to insure a smooth transition for all of you in the Amateur Radio Community. For the immediate future the manufacturing aspect of the RLC products will continue to be done at the Link Communications manufacturing facility. All new sales, repairs and support will be done directly through ATSI's new web site.

ATSI - Audio Test Solutions Inc. is very excited about acquiring the RLC product line and has designed a new web site which is designed and dedicated specifically for the Amateur Radio enthusiasts:

<http://www.audiotestsolutions.com/>

ATSI's new web site will enable you to purchase the RLC products directly from the web site through Paypal. You will also find a variety of links for all of the RLC products. Twenty-two years of information will be available to you whether you are looking for an older discontinued product or one of the newer products. Links to the RLC Download Directory and the RLC Wiki Page will be on this web site so you can download firmware, manuals, programming examples, schematics and much more. Don't forget to click the link to join the free YahooGroup RLC User Group:

<http://groups.yahoo.com/group/RLC/>

This group has several ongoing discussions from the sharing of programming ideas, examples to specific discussions on the RLC repeater products and the associated equipment.

ATSI - Audio Test Solutions, Inc. has been around since 1996. ATSI is a small electrical design and testing facility who has worked with Link Communications, Inc. in the past and looks forward to their continued working relationship in the future. They design and engineer electrical systems while testing hardware systems and audio signal quality.

Link Communications provides cutting edge electronic design, engineering and state-of-the-art manufacturing while specializing in communications product design and development. We globally equip organizations with advanced direct and VoIP communication products. Link Communications produces five main communication product lines with additional lines planned in the future.
