**LINK COMMUNICATIONS RELEASES PORTABLE, INTEROPERABLE TCB-406**

BILLINGS, Mont. – Link Communications has released the newest addition to their Tactical Communications Bridge (TCB) product line, the TCB-406. The TCB-406 is a quick and portable interoperable communications solution, allowing up to five disparate radios to connect with each other. The TCB-406 is portable, but is also very powerful.

Housed in an industry-standard Pelican™ case, the TCB-406 is rugged, waterproof, and ready for extreme conditions. Built upon the Link Communication's established core software, the TCB-406 packs the functionality of the renown TCB-2. Weighing less than 15 pounds, the TCB-406 has a small form factor and is ideal for transporting and rapid deployment.

The TCB-406 is equipped with an integrated LCD touch screen interface allowing radios to be connected and configured with just the touch of a finger. Utilizing a simple graphical interface, anyone can perform advanced operations with little training. The front panel of the unit serves as an operational console, allowing full communication with any of the connected radios, using the integrated microphone and speaker. Remote management is also a priceless, included feature. The TCB-406 has integrated networking and streaming Voice over Internet Protocol (VoIP), allowing remote management from a computer anywhere. A remote participant can fully communicate with any of the connected radios, making this feature perfect for dispatchers, or office-based personnel.

Packed with features, flexibility, and portability, the TCB-406 is the perfect choice for an easy, tactical, interoperable solution.

Link Communications, Inc. has been producing interoperable communications systems since 1989. Beginning with the business-class market and expanding to the public safety market, Link Communications uses its knowledge of radio communication to effectively link multiple communications systems. Link Communications is an international leader in both business and public safety communications. With a full manufacturing facility and design team, Link Communications designs, builds, and tests all units in-house before shipping to customers. Link Communications is a Federal GSA Advantage distributor, contract GS-35F-0061R.
