FOR IMMEDIATE RELEASE

MSAT-G2 Virtual Handset It works where you do.

BILLINGS, MT — Link Communications today unveils a new application, the MSAT-G2 Virtual handset which enables the user to operate a Skyterra MSATiP system over any computer that has access to the Internet. This application runs on your Windows™ compatible computer and utilizes the computer's microphone and speakers as an interface to the MSAT-G2 radio. Individuals or groups of persons can access one radio enabling monitoring and talking like the handset were in your hand. So if you want to use your Skyterra MSAT-G2 radio remotely, the MSAT Virtual Handset application is your solution.

Established in 1989, Link Communications provide cutting edge electronic design, engineering & state-of-the-art manufacturing, specializing in communication product design & development. We equip Federal & State organizations with advanced direct & VoIP communication products. Our Tactical Communications Bridge (TCB) products address rapid communication between multiple radio systems for critical situations. If you have questions on design, development and/or manufacturing, please contact us at 406.245.5002 or visit our website at www.link-comm.com.

Skyterra Communications works with leading technology vendors to develop powerful products and is North America's premier provider of mobile satellite communications services, offering a wide choice of two-way radio, mobile data, voice and fax services via its two existing satellites. www.skyterra.com
