

Virtual Handset

**Talk to your people in the field,
from your computer!**

MSAT-G2 Virtual Handset

The MSAT-G2 Virtual Handset enables the user to operate an MSATiP system over any computer that has access to the Internet. This application runs on your Windows™ compatible computer and utilizes the computer's microphone and speakers as an interface to the MSAT-G2 radio. Individuals or groups of persons can access one radio enabling monitoring and talking like the handset were in your hand. So if you want to use your MSAT-G2 radio remotely, the MSAT Virtual Handset application is your solution.
