

*Talk to your people in the field,  
from your computer!*

## MSAT VIRTUAL HANDSET

The MSAT Virtual Handset enables the user to operate an MSATiP system over any computer that has access to the Internet. This application runs on your Windows™ compatible computer and utilizes the computer's microphone and speakers as an interface to the MSAT radio. Individuals or groups of persons can access one radio enabling monitoring and talking like the handset were in your hand. So if you want to use your MSAT radio remotely, the MSAT Virtual Handset application is your solution.
